General Features

Ensures adoption of world class business practices and leads to profitable e-business. Allows modular implementation facilitating up-gradation from a core set of modules to desired functionality. Customized modules can be developed concurrently. Single point data capturing and access across modules. In-built Audit trail keeps track of the user who created/modified a record along with the date and time. Web enabling of the software eliminates the information barrier to geographically fragmented businesses enabling the open flow between the system. Short Implementation periods (1 to 2 months per module).
